INTRODUCTION:

This is a structured C program of a Digital Clock where the output should be showing at the time it was executed.

PROGRAM:

```
#include <stdio.h>
#include <time.h>

int main()
{
    time_t s, val = 1;
    struct tm* current_time;

    s = time(NULL);

    current_time = localtime(&s);

    printf("%02d:%02d:%02d",
        current_time->tm_hour,
        current_time->tm_min,
        current_time->tm_sec);

    return 0;
```

```
}
```

OUTPUT:

12:31:15
